

PROJECT:

REPLACING A ROOFTOP HVAC SYSTEM

INDUSTRY:

Construction

PROJECT TYPE:

Crane Services

PROJECT OVERVIEW:

To convert an office building in Yale, WA, into a biomedical facility, the contractor had to replace the rooftop HVAC system for improved cooling and ventilation. Needing an expert heavy lift team that could maneuver the building's positioning and handle lifting several large pieces on and off the roof—along with dozens of accessories—partnering with Omega Morgan's crane services team was a no-brainer.

EQUIPMENT USED:

Grove GMK6350L
