

STRENGTH AND TRUST

INDUSTRY:

Restaurant

PROJECT TYPE:

Machinery Moving

PROJECT OVERVIEW:

OM crews jacked up the antique trolley car and weighed it prior to moving so the rigging plan would ensure the floor was not damaged by moving the car in the historical building. The crew then removed the wheels, and set the car onto rails to slide out of the building. It was lifted and set onto the trailer for transport to its new destination. Crews offloaded the car, set onto skates, moved into building into position. Upon approval, the antique trolley car was set down to its final destination.

PROJECT SPECS:

Trolley Car: 33'x8'6"x11' 7,000lbs

EQUIPMENT USED:

Pneumatic 30K Forklift, Machinery Moving Skates, Slide Rails and Jacks

PROJECT:

TROLLEY CAR RELOCATION
